SUDHANSHU RANJAN

Bengaluru, India | +91 6355718609 | rsudhanshu137@gmail.com | LinkedIn | LeetCode

PROFESSIONAL SUMMARY

Senior Backend Software Engineer with **4+** years of experience designing and owning scalable distributed systems in Java and Spring Boot, handling **1M+** applications per month. Strong in multithreaded and concurrent programming, object-oriented design and design patterns, Kafka-based event-driven architecture, and SQL/NoSQL databases (MySQL, MongoDB, Elasticsearch). Leads projects from design to production, tunes performance, and mentors junior engineers.

TECHNICAL SKILLS

Languages: Java, C++
Backend & Frameworks: Spring Boot, Spring MVC, Hibernate, Microservices, REST APIs, Object-Oriented Design, Design Patterns
Distributed Systems & Messaging: Multithreading & Concurrency, Apache Kafka, Event-Driven Architecture, Distributed Systems, Fault-Tolerant Design
Databases: MySQL (SQL); MongoDB, Elasticsearch (NoSQL)
Cloud & DevOps: AWS, Docker, Kubernetes, Helm, Jenkins, Git, CI/CD, Maven, Gradle
Testing: JUnit, Mockito, Unit Testing, Integration Testing, Automated Testing, Code Reviews
Observability & Monitoring: Kibana, ElasticSearch, Apache Superset, Grafana, Prometheus
Core: Data Structures & Algorithms, System Design, Performance Optimization, Production Debugging, Code Reviews
AI Tools: GitHub Copilot, Claude, Prompt Engineering, AI-Assisted Coding & Debugging Workflow

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Freecharge (By Axis Bank), Bengaluru, India *Apr 2025 – Present*

- Engineered Axis Bank's credit card processing platform on a distributed microservices architecture deployed on AWS, reliably handling **1M+** applications per month.
- Designed and implemented a multithreaded, fault-tolerant scheduler processing **10K+** daily applications with concurrent batch processing and retry mechanisms, integrating Credit Card Orchestrator (CCO), Card Service, and Newgen APIs to increase card issuance by **20%**.
- Led the Split Application Journey initiative for NTB V3 in close collaboration with Product Managers, decomposing the onboarding system into Pre-IPA and Post-IPA phases for staged data capture and early eligibility filtering, lifting conversion rates by **30%** across **300K+** monthly applications.
- Architected a Kafka-based reprocessing engine to recover applications stuck on external API failures and timeouts, restoring workflow reliability and increasing card issuance by **30%**.
- Designed a centralized data validation layer at the initial Maximus call to catch validation failures early in the credit card journey instead of at multiple downstream points, and tracked the impact through Kibana logs: downstream error/failure message volume dropped by **90%**.
- Wrote unit and integration tests alongside feature development using JUnit and Mockito for core credit card orchestration services, improving regression coverage and reducing production defects.
- Built reusable platform components adopted by other teams: fixed a security vulnerability in the parent Gradle configuration and built custom annotations for encryption/decryption of sensitive fields (PAN, Aadhaar).
- Profiled and fixed production performance issues through monitoring calls and root cause analysis using Grafana and Kibana, resolving scheduler timeouts by batching MongoDB queries and adding indexing.
- Adopted enterprise AI-assisted development practices using GenAI tools (GitHub Copilot, prompt-driven workflows) for code generation, refactoring, and test creation, validating outputs through peer review and automated testing, increasing per-sprint output by approx **33%** (from **3** to **4** story points).
- Mentored junior engineers through pull request and code reviews, providing feedback on code quality and design, and conducted knowledge-transfer (KT) sessions to onboard new joiners onto the credit card platform.

Software Development Engineer | PeopleStrong, Gurgaon, India *Jul 2022 – Mar 2025*

- Developed and enhanced Recruiter, Onboarding, Candidate, and Vendor portals using Angular, Java, Spring Boot, and Hibernate.
- Designed and implemented scalable REST APIs supporting enterprise-wide HR workflows, with unit tests written using JUnit and Mockito.
- Resolved production issues across environments, improving overall system reliability.
- Executed data migration for **15+** enterprise clients, ensuring data consistency and minimal downtime.

Trainee Software Engineer | PeopleStrong, Remote *Jan 2022 – Jun 2022*

- Delivered feature enhancements and bug fixes across multiple modules of the Recruit platform.
- Gained hands-on experience with Git, JIRA, Jenkins, and backend development workflows.

Remote Problem Setter | HackerEarth, Remote *Sep 2021 – Dec 2021*

- Authored **10+** Data Structures and Algorithms problems for coding contests used by thousands of participants.

EDUCATION

B.Tech, Electronics and Communication Engineering
Indian Institute of Information Technology, Surat, Gujarat, India | Jun 2018 – Jun 2022 | CGPA: 8.18 / 10

ACHIEVEMENTS

- Ranked 9th among 120+ participants, INCEPTION 4.0 coding event, ACM NIT Surat.
- Ranked 19th among 4,250 participants, HackerEarth Data Structures and Algorithms Contest 2021.
- Ranked 81st among 5,500 participants, Inter NIT Coding Competition 2021.
- Specialist on Codeforces; 4-star rating on CodeChef.
